EDUCATION

KIET Group of Institutions

B.Tech, Information Technology | CGPA: 6.72

Ghaziabad, India

Nov 2021 – Mar 2025

TECHNICAL SKILLS

Languages: Java, Python, Scala, JavaScript, C++, Kotlin

Frameworks & Tools: Spring Boot, Spring Security, Play, Flask, Angular, React, Docker, Git, Jenkins

Databases & Messaging: MySQL, PostgreSQL, MongoDB, Redis, Apache Kafka (KRaft), Druid, Flink

Cloud & DevOps: AWS (EC2, Elastic Beanstalk, SNS, SQS, CloudWatch), Azure Spring Apps, Docker, CI/CD

EXPERIENCE

Software Engineer

Apr 2025 – Feb 2026

Solvei8 | Tracki8 MES – Apparel Manufacturing Industry

Intern → Full-Time | Cloud-Edge Manufacturing Execution System serving 60+ global factories

- **RFID Bulk Scanning Engine:** Replaced QR single-scan workflows with an RFID bulk system processing **5–10 tags simultaneously**; engineered a tag lifecycle state machine with **versioning logic** to prevent data collisions in high-concurrency environments, enabling safe tag reuse across production cycles.
- **Cross-Microservice WIP Integration:** Identified a missing data linkage between two microservices; engineered a service-to-service integration to fetch live WIP state and surface it in the Tag Generation module's history view, giving floor supervisors real-time traceability without manual lookups.
- **Scan & Pack Refactor:** Led full-stack refactor to support **multi-color, variable-size cartons**; migrated **3 core production tables**, modified **21 files** across Scala (Play Framework), Slick mappings, DTOs, Excel parser, and REST APIs – shipped as a **zero-downtime global update** eliminating carton inefficiency across all factories.
- **Set Packs (Combo Packing) – Greenfield Architecture:** Co-designed a **two-tier packing system** (Set Pack → Carton) for complex combo orders, iterating the data model **3 times** with senior developer and solutions team. Built **5–10 APIs** in Scala with optimistic concurrency control to prevent dual-claiming, MongoDB aggregation pipelines, hash-based audit logging, and **10+ DTOs** to minimize payload size.
- **Measurement QC Automation:** Built automated QC services that generate production compliance reports directly from user-defined specifications, eliminating manual reporting overhead and enabling real-time data-driven floor monitoring across all factories.
- **API & Data Layer:** Designed **20+ RESTful APIs** in Java/Scala; optimized MongoDB aggregation pipelines and PostgreSQL schemas with regression testing to reduce client-reported data issues. Integrated **Apache Kafka** event streaming for manufacturing analytics, co-authoring performance contracts with the data engineering team.

Software Developer Intern

Jul 2024 – Dec 2024

Viral Fission

- **Notification Ecosystem:** Replaced cron-based monitoring with a Redis + Kafka distributed pipeline (In-App, SMS, Email) serving **150k+ users** with **1M+ daily updates**; added DLT and automated retries for **100% delivery reliability**. Led Kafka vs. AWS SQS benchmarking to produce a cost-performance scaling roadmap for leadership.
- **Platform Engineering:** Architected corporate website and CMS with **Angular 18** and Spring Boot; implemented a Global Exception Handler with custom types and unit tests, standardizing error reporting across all mobile and web clients.

PROJECTS

Blogger Hub | *Java 17, Spring Boot, Spring Security, Apache Kafka, MongoDB, Redis, Docker, Azure*

- Built production-grade multi-user blogging API with **JWT + OTP auth**, refresh token rotation, and **3-tier RBAC** (Admin/Free/Premium) enforcing subscription-based feature gating via Spring Security filter chains; engineered async Kafka notification pipeline for 5+ event types, decoupling fan-out from core request flows.
- Optimized MongoDB with compound indexes and paginated read/unread tracking; containerized with Docker and deployed on **Azure Spring Apps** with Cloudinary CDN for media.

Oppia | *Python, Angular, Open Source Contribution*

- Automated translatable content creation, reducing contributor effort by **60%**; wrote unit tests against the full test suite and mentored contributors, raising average contribution quality score by **10%**.
