

MOHAMMAD AMAAN LARI

BACKEND DEVELOPER | JAVA & SPRING BOOT | MICROSERVICES & CLOUD ENTHUSIAST

Pursue a career in back-end development, emphasizing expertise in Java and Spring Boot, while aiming to deliver impactful software solutions in various sectors such as FinTech and Healthcare.

PROFILE SUMMARY

- **Result-oriented with 10 months experience in Software Engineering, focusing on back-end development in Tech industry**, showcasing strong capability in creating scalable applications that meet user demands.
- **Working as a Software Engineer at Solvei8**, tasked with the design and upkeep of essential back-end systems that facilitate manufacturing processes for a worldwide network of factories.
- **Engineered scalable microservice-based back-end systems using Java and Spring Boot**, handling high-volume API requests across distributed enterprise and manufacturing applications.
- **Designed and implemented secure RESTful APIs with role-based access control, JWT authentication, and optimized data workflow** for performance and reliability.
- **Integrated Kafka and Redis for real-time messaging, caching, and event-driven workflow**, enabling near real-time analytics and operational monitoring across distributed systems.
- **Collaborated in Agile cross-functional teams, delivering end-to-end back-end features** from design through deployment while adhering to CI/CD and testing best practices.
- **Implemented Redis-based OTP and session management, containerized deployments with Docker, and cloud-native solutions on AWS/Azure** to ensure secure, reliable, and scalable applications.
- **Applied TDD with JUnit and Mockito**, structured logging, and global exception handling to maintain high code quality, system reliability, and maintainability.

TECHNICAL SKILLS

- **Programming Languages:** Java, Scala, Python, JavaScript & Kotlin
- **Frameworks & Tools:** Spring Boot, Play Framework, Flask, Git, GitHub, BitBucket, SBT, IntelliJ IDEA & Figma
- **Databases & Messaging:** MongoDB, PostgreSQL, MySQL, Redis, Kafka, Druid & Flink

CORE COMPETENCIES

Microservices Architecture

RESTful API Design & Development

Event-Driven Architecture

Spring Data JPA / Hibernate ORM

Spring Security & JWT Authentication

Spring Actuator & Monitoring

Database Design & Normalization

Query Optimization & Indexing

Data Migration & ETL Scripting

Unit & Integration Testing

Continuous Integration / Deployment (CI/CD)

High-Throughput Systems

Scalability & Load Handling

Agile & Scrum Methodologies

Code Review & Peer Collaboration

EDUCATION

- **B.Tech. in Information Technology** from KIET Group of Institution in 2025

PERSONAL DETAILS

- **Date of Birth:** 6th May 2002
- **Languages:** English & Hindi
- **Address:** Noida, 201301

WORK EXPERIENCE

Solvei8, Noida | Since April 2025 | **Software Engineer**

Key Result Areas:

- Contributing as a Back-End Engineer on Tracki8 MES, supporting 60+ global factories by enabling real-time production and quality tracking for millions of garments daily.
- Designing and developing Microservice-based back-end systems using Java, Scala, Play Framework, and Spring Boot, reliably processing millions of API requests across distributed manufacturing environments.
- Implementing RFID-based bulk scanning workflow, eliminating manual identifier entry and mainly reducing batch processing time while meeting high-volume factory operational requirements.
- Developing measurement-driven Quality Control services, collaborating with engineering peers to generate automated quality reports supporting real-time production visibility and decision-making.
- Designing and optimizing data models and queries, including MongoDB aggregation pipelines and PostgreSQL schemas, and executed database migrations to support evolving performance and scalability needs.
- Delivering core MES features end-to-end, including RFID lifecycle management, WIP tracking, Scan & Pack, and Set/Combo packing workflow from design through production roll-out.
- Enabling event-driven manufacturing analytics, publishing production events to Kafka and supporting near real-time analytics in Druid in collaboration with platform and analytics teams.
- Improving system stability and reliability through defect resolution, API enhancements, factory-specific configurations, and active participation in Agile sprint planning and delivery cycles.

INTERNSHIP

Viral Fission, Mumbai | July 2024 to December 2024 | **Software Developer Intern**

Key Result Areas:

- Designed and implemented a real-time notification system using Redis and Kafka, replacing cron-based monitoring to improve system responsiveness, reliability, and event-driven communication.
- Enhanced back-end API robustness by implementing global exception handling and custom error responses, simplifying mobile integration workflow and reducing debugging effort for consuming teams.
- Developed back-end services for a corporate website, enabling CMS-driven dynamic content management and applying environment-specific configurations following Spring Boot best practices.

PROJECTS

Blogger Hub | 3 Months

Key Result Areas:

- Developed a RESTful API platform using Spring Boot, implementing Redis-based OTP authentication, JWT role-based access control, Markdown content storage, Cloudinary image integration, and deployed on Azure cloud.

Canteen Connect | 6 Months

Key Result Areas:

- Developed an MVP real-time food ordering system, featuring a React web portal, Flutter mobile app, integrated payment processing, and token-based pickup verification for campus operations deployment.
